

Enabling end-to-end transformation for life sciences

Discover, develop, and deliver new treatments more quickly and at a lower cost with SAP on Google Cloud

Life Sciences is one of the world's most exciting and forward-looking sectors, yet it has also been one of the slowest to adopt new digital technologies.

With more than **58% of life science organizations** still using spreadsheets to aggregate and analyze production process data¹, these organizations are feeling the effects of siloed information, inefficient manufacturing processes and inflexible legacy infrastructures.

In fact, inventory errors have cost life sciences organizations **\$1 trillion** in lost sales.²

Imagine getting more from every clinical trial, bringing new therapies to market faster and gaining much-needed visibility over manufacturing. With new digital technologies, businesses are regaining lost value across the entire supply chain - from clinical trials and R&D to manufacturing and distribution - while maintaining security and compliance.

With SAP on Google Cloud, life sciences businesses can organize, manage and analyze data at scale, transforming every step of the value chain.

Modernize your R&D infrastructure

Enable researchers to easily access and analyze data and achieve more scientific breakthroughs.

Accelerate clinical trials

Efficiently analyze research data and link with other data to track progress and predict the probability of trial success.

Optimize manufacturing

Improve production with a complete 360-view of manufacturing operations, providing increased insights.

Improve commercialization

Reach customers quickly, engage patients intelligently, and run your business with maximum agility.

Enhance patient value

Personalize your patients' medical treatment by integrating data from multiple sources.

Deliver seamless experiences with agility and speed by moving your SAP environment to Google Cloud

Google's worldwide network

Build on future-proof infrastructure that returns billions of search results in milliseconds

Managed open source

Maintain best-in-class platforms for innovation, flexibility and scale

Hybrid and multi-cloud solutions

Operate across legacy systems and multiple clouds

AI and ML innovation

Accessible and deployable across your enterprise

Trust and security

Protect information, applications and devices with end to end security

Serverless simplicity

Eliminate operational complexity with fully managed serverless offerings

We co-develop industry-specific solutions with global and regional partners

Google Cloud is the right partner for you to migrate to SAP S/4HANA. It provides a simple, customizable upgrade path for your

transformation journey, with a secure, high-speed network and flexible deployment options.

You can run SAP better with agility, minimize downtime and leverage Google Cloud integrations to innovate with data management, AI/ML and robotics capabilities. Plus, a 100% virtualized infrastructure with true pay-per-use means you can grow without limits.

FFF Enterprises maximizes reliability of pharmaceutical services through technology

FFF Enterprises is the nation's leading supplier of critical-care biopharmaceuticals, plasma products, and vaccines. The wholesaler was experiencing outages and continued issues running SAP on its legacy infrastructure, which put its business and the patients and healthcare providers who rely on it at risk.

With Google Cloud Partner Managecore, FFF Enterprises migrated to Google Cloud Platform and gained the architectural overhauls necessary to improve the availability and reliability of SAP apps to support a broader digital transformation.

Showcase measurable impact

- Improved SAP performance by 80% while simultaneously lowering costs
- Accelerated administrative technical tasks to empower IT team to focus on innovation and support

Migrating our SAP hosting service... has been a game changer. It maximizes the reliability of our IT systems and puts us on a path toward advancing our digital transformation."

John Hahn, Chief Digital Officer, Chief Information Officer, FFF Enterprises
