

# Paradigm°OS

Accelerating the Design and Deployment of AI Workflows for Legal

Powered by Gemini Enterprise

OVERVIEW

## Your AI-Native Operating System Powered by Gemini Enterprise

Paradigm°OS is the AI-native operating system behind how we deliver. It reads how your legal operation actually runs, redesigns the workflow around AI, and stands up the scaffolding in days — then carries it into production governed and accountable. With 17 workflows already proven across matter management, billing, eDiscovery, IP, governance, and contracts. What deploys becomes your AgenticOS: an operating capability your enterprise owns, not a dependency on us.

|                   | Current    |   | Paradigm°OS |
|-------------------|------------|---|-------------|
| Workflow Mapping  | Months     | → | Hours       |
| Integration       | Per System | → | Per Model   |
| Governance        | A Policy   | → | A Control   |
| First Agents Live | Months     | → | Weeks       |

BENEFITS

## The Advantage Delivered with Paradigm°OS

01

### An Advantage You Leverage From Day One

Seventeen validated workflows across six legal departments. Your practice maps to patterns that already work, so deployment starts in weeks and routine volume moves to agents while attorney hours go where judgment matters.

02

### Governance That Keeps Pace With Autonomy

Every decision traceable to the guideline or approval rule it reasoned from. Non-standard clauses route to review, high-value contracts require signature, auto-renewals flag ninety days out — built into how the systems are constructed rather than added under scrutiny.

03

### Capability That Compounds, Instead of Depreciating

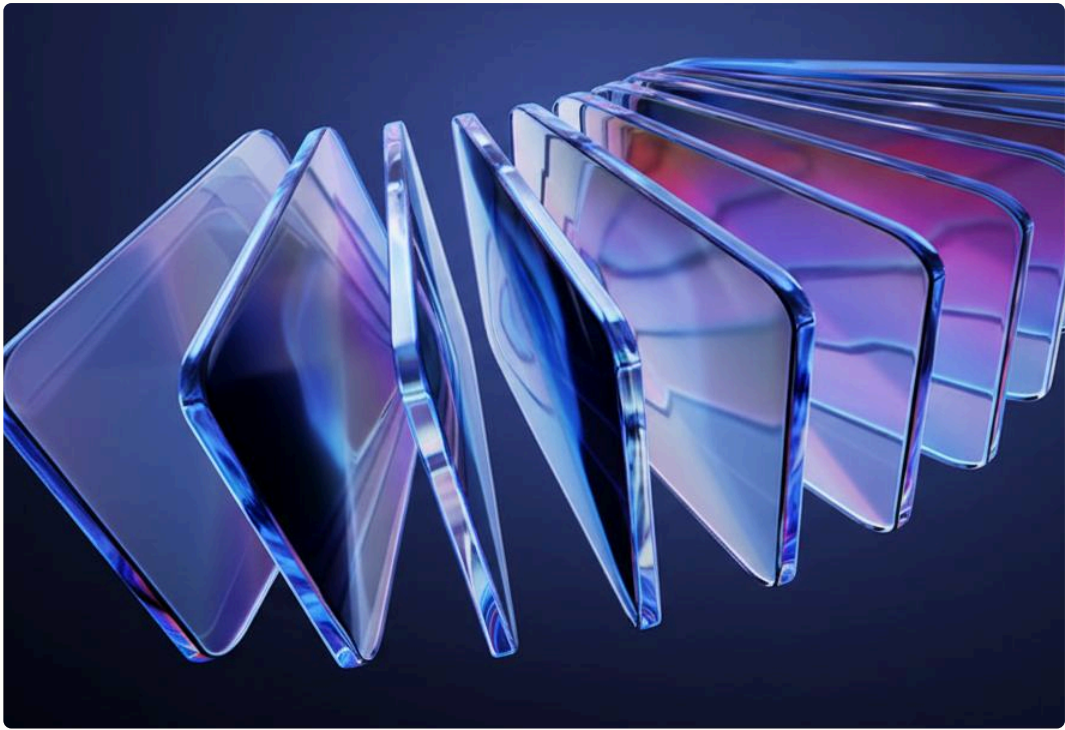

Most technology loses value from the day it goes live. This gains it. Every workflow you deploy makes the next one faster to build, and what runs in production keeps improving the operation around it — long after the engagement ends.

HOW IT WORKS

From Business Discovery to Production Workflows in Just Weeks

Every workflow deploys two things: an agent that does the work and an SOP playbook calibrated to how your department actually operates — your thresholds, your roles, your escalation paths. Matter cycle time, billing realization, review throughput, obligation exposure: these are the places the operating model changes.

LEGAL DEPARTMENTS

WORKFLOWS

01 Matter Management

Three workflows from intake through staffing. Conflict checks map relationships and clear faster, and budgets phase by scope with attorney matching. Integrated with Clio, PracticePanther, and iManage.

- Matter Intake
- Conflict of Interest Check
- Matter Budgeting & Staffing

02 Contract Management

Three workflows across lifecycle, obligations, and renewals. Clauses assembled, negotiation tracked, and obligations extracted with owner alerts ahead of deadline. Integrated with DocuSign, Ironclad, Icertis, and Agiloft.

- Contract Lifecycle
- Obligation Monitoring
- Renewal Management

03 Billing & Finance

Three workflows protecting realization at the source. Block billing detected, UTBMS codes validated, and outside counsel guidelines enforced before invoices go out. Integrated with Thomson Reuters Elite 3E, Aderant Expert, and CounselLink.

- Time Entry Review
- LEDES Invoice Processing
- Trust / IOLTA Accounting

04 eDiscovery

Three workflows across holds, review, and productions. Custodians identified and acknowledgments tracked, TAR models trained, redactions checked before bates stamping. Integrated with Relativity, DISCO, and Nuix.

- Litigation Hold
- Document Review
- Production Management

Managed from Your Operating Console

Once workflows are live, AgenticOS is what your team runs them from. Not a dashboard we maintain on your behalf — the operating console for your agent fleet.

**Portfolio Health** — executive view of return, exception trends, and where humans are still intervening

**Mission Control** — real-time fleet status, throughput, and SLA compliance

**HITL Action Center** — the human-judgment queue, routed by role, with confidence scores

**Decision Audit Trail** — an immutable record of what was decided, why, under which rule, and who approved it

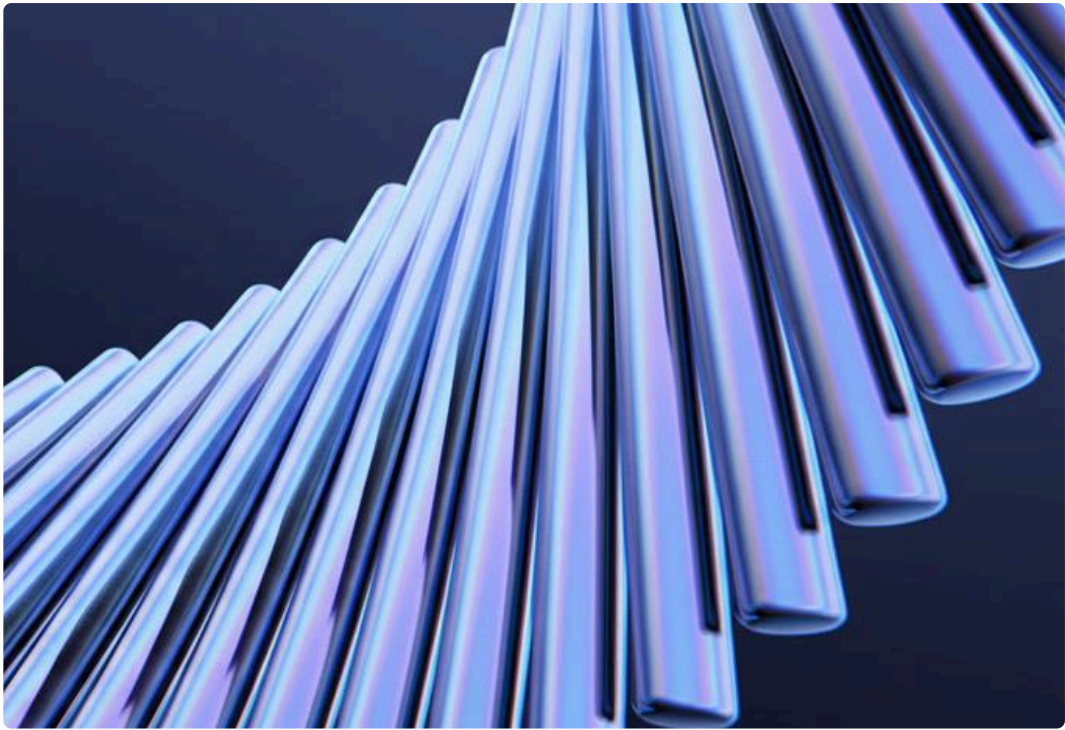

WHO WE ARE

Engineering Your AI-Native Advantage with Google Cloud

66degrees is an AI-native company that partners with enterprise legal organizations to turn AI into a real operating advantage. We engineer across the full Google Cloud stack, with forward-deployed engineers and Paradigm°, our AI-native delivery platform, grounded in how you operate.

Enterprise-Grade Engineering at AI-Native Speed

|                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                           |

CAPABILITIES

Google Cloud's Leading Full Stack AI-Native Partner

66degrees is a proud Diamond Partner, and this status is earned on outcomes. We've modernized legacy estates, put agents into production, and driven the adoption that turns deployment into return, on every layer of Google Cloud.

- + Agentic Labs
- + AI-Native Foundations
- + AI Workflow Transformation
- + AI Workforce Enablement
- + Managed Agentic Services

Ready to Learn more about Paradigm°OS?

Bring one workflow your legal team runs today. We'll show you the agent architecture and SOP playbook Paradigm°OS generates for it, and the path from there to production.
