

# Architecting hybrid cloud infrastructure with Anthos

Architecting Hybrid Cloud Infrastructure with Anthos teaches infrastructure operators, architects, and DevOps professionals how to modernize, observe, secure, and manage applications using Istio-powered service mesh and Kubernetes, whether they're on-premises, on Google Cloud, or distributed across both. This learning path is a mix of lectures and hands-on labs that can be taken on demand or in a classroom setting.

## On demand:

We've partnered with Coursera and Pluralsight to bring you on-demand training that you can take anywhere at your own pace.

## Instructor-led training:

If you prefer to learn in a classroom environment, we've also partnered with ROI Training and Jellyfish to offer you instructor-led training around the globe.

 [Sign up](#) to take an in-person class through ROI Training in New York City, Reston, Austin, Chicago, Sunnyvale, London, Stockholm, Berlin, Milan, or Bangalore. Registrants will receive a 20% discount.

 [Sign up](#) to learn on Jellyfish if you'd like to take an in-person class (offered in London, San Francisco, and Johannesburg), a virtual class, or a private in-person class for your team.
