# Google Unified Security Recommended Solution Overview with **FortiGate NGFW and FortiSASE**

## Consolidate Network and SASE Security, Streamline Operations, and Achieve Unified Security Outcomes

### Aggregate security telemetry and accelerate response

The modern security landscape is defined by complexity, tool sprawl, and fragmented data, which is exacerbated by the expansion of hybrid and work-from-anywhere (WFA) environments.

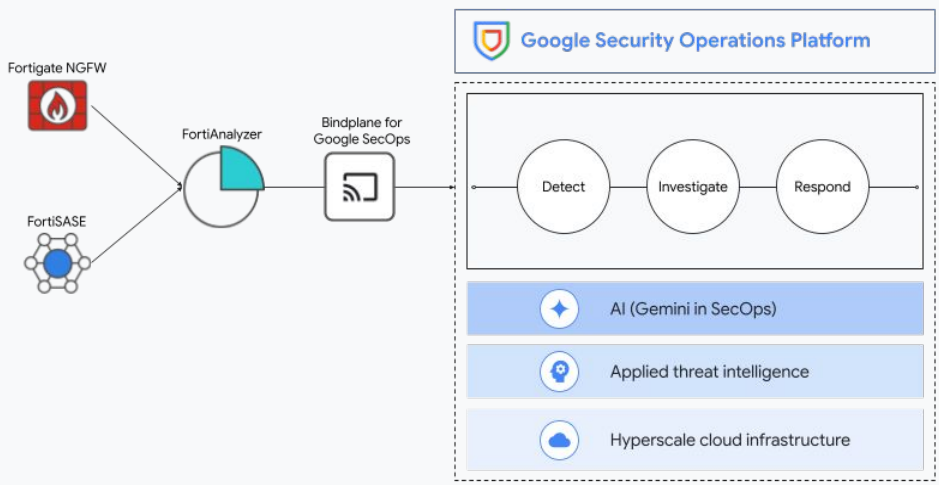
Security teams are forced to operate with disparate, best-of-breed solutions, leading to slow, reactive responses and inflated Mean Time to Detect and Respond. Organizations need security that is cohesive, not complex, to unify their defenses and simplify their security operations.

## Unify the Edge to Automate the Core

The integration of FortiGate NGFW and FortiSASE with Google Security Operations transforms your security posture. By natively consolidating all network and SASE telemetry into Google's AI-powered platform, you gain unified, deep threat visibility across your global hybrid data estate.

FortiAnalyzer serves as a aggregation platform, and is deployed in conjunction with Bindplane to normalize and surface Fortinet logs into Google Security Operations. This integration reduces tool sprawl and fragmentation, allowing analysts to leverage Fortinet's rich visibility with Google Security Operations' automation and AI playbooks to significantly reduce Mean Time to Respond and achieve faster, more cohesive security outcomes.

**Securing with Fortinet + Google Security Operations**



FORTINET

Fortinet integrates across the Google Unified Security portfolio to enable our joint customers with streamlined controls and deep threat awareness. FortiSASE enables distributed organizations to achieve better security outcomes by delivering one of the industry's most unified, flexible, and intelligent solutions, which seamlessly integrates advanced networking and security into a single cloud-native platform—empowering organizations with consistent protection, dynamic scalability, and real-time, AI-driven threat intelligence for secure access anytime, anywhere. Leveraging Fortinet's extensive visibility and sensor network, customers are able to aggregate and contextualize threats with other security signals to identify and remediate malicious attacks early and automatically.

### Google Security Operations

FortiGate Firewalls and FortiSASE telemetry is ingested directly into Google Security Operations to correlate network, edge, and SASE security events with all other enterprise data, enriching investigations and triggering AI enhanced automated responses.

### Google Threat Intelligence

Google Security Operations customers can benefit from GTI enrichment when ingesting FortiGate and SASE logs into SecOps.

> *"Our Google Unified Security Recommended program is fundamentally about eliminating complexity and delivering superior security outcomes. Integrating Fortinet's NGFW and SASE telemetry directly into Google Unified Security provides the unified visibility and rich context necessary to fuel our AI-powered defense," said Chris Corde, Senior Director of Product Management, Google Cloud. "Customers can move beyond fragmented data, leveraging Google Unified Security's automation and Gemini to achieve more accurate threat detection and accelerate response actions across their entire hybrid environment."*
