Empowering AI-enabled energy startups to go further

Google for Startups Accelerator is a 12-week hybrid program of intensive workshops and expert mentorship for growth-stage startups based in Europe and Israel. The accelerator aims to connect the best of Google's products and people to clean energy technology innovators across the region building with AI and Cloud.

Selected startups from across the region will receive mentoring and technical support from Google engineers and external experts tailored to their business through a mix of in-person and virtual experiences, one-to-one and one-to-many learning sessions.

We've already successfully hosted a cohort dedicated to energy startups leveraging AI [\[Read more\]](#). By replicating the program, we remain committed to empowering the startups driving the global energy transition!

What to expect

12-week hybrid (online and in-person) program with workshops and mentoring sessions followed by an in-person demo day showcase:

- Exclusive access to mentoring from Google leaders, engineers and external experts.
- Scaling clean energy companies to solve the specific challenges around energy, predictive models, optimization and more.
- Workshops covering Cloud and ML, product, design, growth and people.
- Equity-free support and Cloud Credits for eligible startups.
- Access to global Accelerator Alumni community.

Who should apply?

Google is looking for growth-stage startups meeting the following criteria:

- Pre-Seed and Series A high potential tech startups working on clean energy, grid solutions with growing teams (5+ people) headquartered in Europe or Israel.
- Funded and revenue-generating startups
- Keen to participate and learn from experts, both via 1:1 sessions and group workshops, including attendance by min. 3 C-level executives at all physical events and online bootcamps.
- Focus areas: grid modernization and enhancement; demand flexibility and optimization; energy affordability and competitiveness solutions for households and industries.
