Take your enterprise to the next level with Google Chrome Enterprise

Companies are rapidly moving to the cloud. The rise in SaaS adoption has brought with it a new breed of worker – the cloud worker – someone who is productive from any location, on any device, accessing business apps via the cloud, and spending 3+ hours a day in their browser.

The average employee now uses **22 cloud-based apps** and 3 devices as part of their job¹, and **94% work while commuting or at home²**.

Legacy endpoints, which require a high degree of IT maintenance for provisioning and continued management, are not able to effectively support businesses as they migrate to the cloud nor empower cloud workers. Instead, organizations need endpoints that will:

- Deliver secure and consistent access across mobile, SaaS and legacy apps
- Protect against ever-evolving threats, including phishing and malware
- Give IT more control, freeing up resources from basic administration and manual patching

Connect your employees to the cloud with Chrome Enterprise

Chrome Enterprise with its OS, browser and powerful devices, provides employees with instant, secure and reliable access to online resources, authorized apps, and legacy software.

Available in a range of form factors and specs, Chromebooks are suitable for everything from accessing email and surfing the web, through to running multiple simultaneous applications with high storage capacity and video support.
Chrome Enterprise license for your Chromebooks

The Chrome Enterprise license builds upon the speed, simplicity, and security that come standard with Chrome OS. Remotely manage, provision, deploy, and implement policies to Chromebooks across your enterprise, streamline arduous IT tasks, and enable users to be more productive — building incredible value for your business.
