

Configure the Nest Learning Thermostat (4th gen) from an Installer's Phone

With “Pro Setup” on the Nest Learning Thermostat (4th gen), provisioning does not require a customer’s phone, Wi-Fi, or their Google account info.

After initial configuration, the device is not linked to the installer’s Google Home app, allowing the homeowner to add it to their own Google Home to configure Wi-Fi, schedules and features.

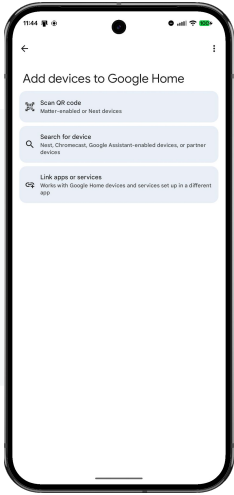

Configuration is completed in the installer's **Google Home app**

Input your **Nest Pro ID** to stay connected to your customer via **HVAC System Health Monitor**

How to Install the Nest Learning Thermostat (4th gen) using Pro Setup

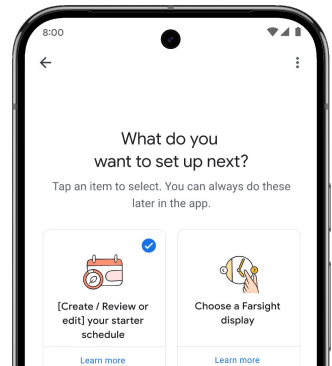

- Select the “+” symbol at the top of the **Google Home app**
- Select “**Device**”
- Select **Select “Scan QR code”**

- Scan the **QR code** or enter the **setup code**
- Select “**Pro Setup**” and enter your **Nest Pro ID**
- Select “**Already installed**”

- After connecting, **select a language**
- Review **wires detected**
- The process will then **test your system’s power**
- Configure **custom heat pump setting** options
- Configure **system settings including optional Advanced Pro settings**
- Choose what **mode** should be used that day

The Pro Setup process is now complete.

The customer will set up temperature preferences, schedules, Home & Away Routines, and add additional family members.
