

Install the Nest Thermostat with Pro Setup

With “Pro Setup” on the Nest Thermostat, provisioning does not require a customer’s phone, Wi-Fi, or their Google account info.

After initial configuration, the device is not linked to the installer’s Google Home app, allowing the homeowner to add it to their own Google Home to configure Wi-Fi, schedules and features.

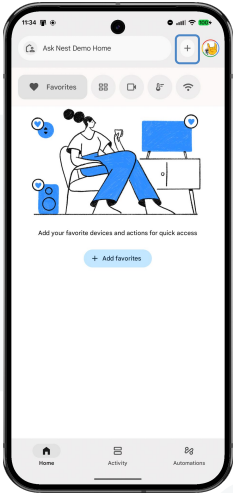

Configuration is completed in the installer’s
Google Home app

Input your **Nest Pro ID** to stay connected to your
customer via **HVAC System Health Monitor**

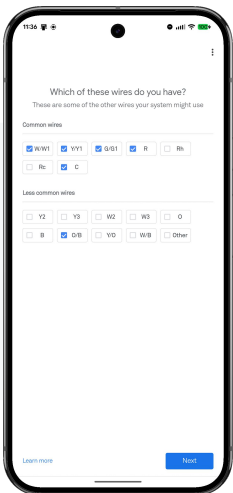

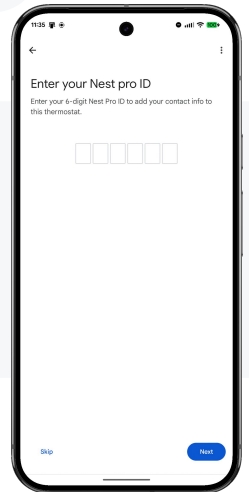

How to Install the Nest Thermostat using Pro Setup

Select the “+” symbol at the top right corner of the **Google Home app**
Select “**Device**”
Select **“Scan QR code”**
Scan the QR code on the back of the thermostat

Select “**Nest Pro Install**”
Enter your **Nest Pro ID**
Select “**Already Installed**”

Select **which wires you have**
Select **Language**
The process will then **test your system's power**
Configure **source, delivery, and fan options**
Choose what **mode** should be used that day

The Pro Setup process is now complete.

The customer will set up temperature preferences, schedules, Home & Away Routines, and add additional family members.
