S. Morris Ltd. chooses simple device management with Android Enterprise Essentials
S. Morris Ltd. is a family-owned business that creates and delivers high-quality construction materials to customers throughout southwest England. With products like concrete blocks and bricks, ready-mix concrete and flooring materials, the company provides its customers with many of their building project essentials.

Strong customer service and timely delivery are key to its success. As part of S. Morris Ltd.'s effort to continually refine its operations the company shifted its ordering and delivery confirmation from paper to digital processes, enabling delivery drivers to confirm orders and accept digital signatures from a mobile device.

S. Morris Ltd. uses Android Enterprise Essentials to manage these devices with ease. With Essentials, the company has a simple management solution that protects critical data.
To protect company data, we needed to have the right device management. But we didn’t want an overly complex solution. My team has many responsibilities, so we needed a smooth and efficient way to manage these devices.

Will Vincent, Financial Controller, S. Morris Ltd.
Simple, secure **device management**

Setting up devices and getting them into the hands of our delivery drivers was quick and easy. The S. Morris Ltd. team selected Samsung Galaxy A02 devices through Essentials service provider Tela. The purchase and setup process is built to be simple — the Samsung devices arrived at the S. Morris Ltd. office ready to use, right out of the box.

Essentials enables S. Morris Ltd. to enforce necessary security policies, like requiring a PIN code to unlock the device and ensuring that the malware protection provided by *Google Play Protect* is always in place. The devices are regularly shared among different drivers the company contracts with, some of whom also work for competitors. When a driver has completed their assignment, it’s simple to jump into the Essentials portal and assign a new PIN to a device.

The delivery teams have a lot to keep track of throughout their day. With Android devices, they have access to business-critical apps that make the delivery process smoother for their team and customers. No more paper receipts, and inventory is automatically up to date. And with Essentials, management tools are in place to ensure customer data is secured on the devices.

“As we use a larger number of drivers, many of them will only use a device for a short period of time. With Essentials, I can quickly change the PIN for a device through the Essentials portal. It’s a simple and quick way to enforce this critical security layer on our devices.”

**Will Vincent**
Financial Controller, S. Morris Ltd.
New digital efforts through **Essentials**

For S. Morris Ltd, the success with Essentials has inspired the company to look at other areas of the business that would benefit from digitization through Android — like capturing, sharing and saving information more efficiently. With Essentials’ security features and simple management tools, they can further scale these efforts with ease.
