

# Elevate clinical security & performance with

## Chrome Enterprise

Modern healthcare demands a balance between rigorous data security and seamless clinical workflows. Chrome Enterprise Premium provides advanced threat protection and data loss prevention (DLP) without slowing down your care teams.

### Exclusive Healthcare Offer

We are removing the friction from technical evaluations to help your organization experience the next generation of secure clinical browsing.

### Chrome Enterprise Premium Specialized Healthcare Offering

#### Extended 6-Month Trial

Move beyond standard proof-of-concept windows with a trial period designed to align with clinical rotation and budget cycles.

#### 50 No-Charge Seats

Provision a full department or specialty clinic at no cost for the duration of your evaluation.

#### \$5K Services Funding

Upon conversion, existing partners can access dedicated funding to offset implementation and optimization services.

#### High-Touch Technical Onboarding

Available exclusively for partner-led deals, this provides direct access to Epic and Google technical experts to ensure your environment is configured for maximum security and performance.

## Optimized for Epic & Clinical Workflows

Clinical productivity is at the heart of our healthcare mission. Chrome Enterprise Premium is specifically tuned to support the modern EHR experience:

- **New deep Epic Integration:** Ensure your EHR environment runs with peak stability and speed through optimized Chrome Enterprise configurations.
- **Legacy App Support:** Securely bridge the gap between modern web applications and legacy clinical tools.
- **Reduced Sign-on Friction:** Maintain high security without forcing clinicians through repetitive, cumbersome login hurdles.

## Enterprise-Grade Security for Patient Data

Protecting Protected Health Information (PHI) is non-negotiable. Chrome Enterprise Premium empowers IT leaders with:

- **Context-Aware Access:** Ensure only authorized users on managed devices can access sensitive patient records.
- **Advanced DLP:** Prevent unauthorized data transfers and accidental PHI leaks with granular, content-aware controls.
- **Threat Prevention:** Real-time protection against phishing and malware designed to target healthcare infrastructures.
- **Deep Visibility:** Comprehensive reporting and forensics to simplify compliance audits and security reviews.
