

Chrome Enterprise Recommended Solution Overview with Appspace

Appspace connects your people, places and spaces with digital signage and kiosk solutions

The Appspace workplace experience platform provides workplace management and communications solutions to unify the physical and digital workplace.

Our easy to use app runs on Chrome OS to help you keep everyone connected and up to date. Publish company messages, news, and more across all your digital signs and conference room TVs with a single click.

Provide an in-office experience people love with interactive kiosks to help people get to where they need to with wayfinding. Know who is in the building with visitor management, and book workspaces with space reservation.

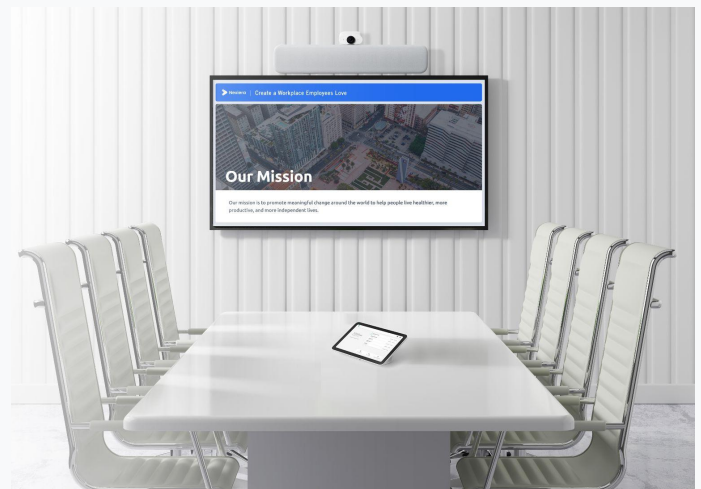

Appspace helps improve the workplace experience with communications and workplace management to create a workplace employees love..

Discover the benefits

With digital signs and kiosks, every moment is an opportunity to stay informed and connected

Appspace provides the content creation and publishing to Chrome OS devices. Together we make it easy to register and publish content to a single device or company wide.

Organizations can decide which screens are showing what information. Employees can watch town halls and livestreams, get important alerts, and highlight exciting milestones all with a single platform. Any touchscreen Chrome OS device is easily transformed into an interactive kiosk for the office, campus, shop floor, and more.

With Appspace and Google, everyone can stay engaged and aligned with relevant content that seamlessly connects them and their workplace.
