Work securely and productively in the cloud with Chrome browser

Simple to manage and keeps your organization secure, Chrome is the browser for your enterprise.

With the rise of cloud apps, the role of the browser is changing rapidly. It’s now a critical endpoint; a strategic productivity and security layer in the enterprise tech stack.

Employee behaviors are changing, too. With a huge rise in flexible working, employees expect the ability to access their cloud-based applications from their device of choice – often via their browser.

In response to these changing dynamics, Chrome builds on the foundation of Chromium to deliver enterprise-grade speed, security, and stability to your workforce.

Empower your workforce while keeping your organization safe

Chrome combines the innate helpfulness of Google with enterprise-grade security and management controls. Which means that your workers can be more productive, with all their favorite apps and tools at their fingertips. And your IT team can gain full visibility into their browser deployments, while the business is protected against web-based threats.

Google innovation in every tab

Tap into the broadest and deepest technology ecosystem on the web, and help your employees do their best work.

A rich array of productivity tools are built-in to help users, such as Google Search, Google Translate and more.

Google has released millions of lines of code to the open source community that works together to improve the browser.

Start with Chrome, then launch into enterprise tools like Google Cloud Platform, Google Workspace, Chrome OS, and more.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A more productive way to work in the cloud</strong></td>
<td>Simplify the way your cloud workers get tasks done on the web. Access open tabs on any device: With Chrome sync and cross-platform compatibility, you can take bookmarks, extensions, and open tabs across any platform or device. Find files and info faster: Easily access work files from Chrome’s “omnibox”, the two-in-one search bar for both Google Search and Google Drive. Give users what they want: From personal to professional, choose the browser more workers already use at home, so they can jump right in and be productive faster.</td>
</tr>
<tr>
<td><strong>Proactive defense against threats and user error</strong></td>
<td>Protect your organization from external and internal threats with Chrome’s built-in protections. Protect users from web threats: Chrome’s Safe Browsing will help your users steer clear of infected or malicious sites, providing timely warnings to prevent users from visiting them. Prevent the spread of malicious code: The site isolation feature stops malicious code spreading within different processes on the same tab. Alert users about passwords: Protect enterprise accounts by sending users a warning when they re-use their corporate password. Set permissions for extensions: Create allowlists and blocklists for extensions or use a permissions-based approach to security.</td>
</tr>
<tr>
<td><strong>Easy, centralized management with Chrome Cloud Management</strong></td>
<td>Give IT admins full visibility and cross-platform control with Chrome management tools. Manage across platforms centrally: With unified browser management, you can manage everything across platforms from a single console. Stay compliance ready: Meet internal governance and compliance standards with granular functionality controls. Gain greater visibility: Review browser details and access detailed reporting to make more informed decisions around users and security. Manage apps and extensions in one place: Use built-in tools for extension management, with the option to force-install or block extensions across machines. Streamline on-prem management: Use Chrome’s Group Policy for on-prem management, with hundreds of policies available for Windows. Get 24/7 support from Chrome experts: With the option of 24/7 access to specialists within Chrome Enterprise Support, your workers won’t miss a beat.</td>
