

# Chrome Enterprise Recommended Solution Overview with Webex Meetings

Use Webex and Chrome OS to enable engaging, flexible and inclusive collaboration in the hybrid world of work

In the hybrid world of work, 98% of meetings are expected to have at least one remote participant.

To remain competitive, enterprises will need to provide a real-time collaboration platform that delivers interactive and engaging experiences, breaks down barriers across locations and languages, and empowers everyone to do their best work, regardless of where they work from.

Webex on Chrome OS can help your organization succeed in the hybrid world of work, with a solution that leverages the unique strengths of each in providing an engaging, flexible and supportive collaboration platform with the security, reliability and quality you expect from both Webex and Chrome OS.

## Discover the benefits

Collaboration that's simple and easy with Webex on Chrome OS

-  Webex offers a simple and intuitive experience with no downloads or plug-ins required.
-  Whether joining a meeting from the office, home or on the go, Webex on Chrome OS delivers industry-leading collaboration for the modern enterprise.
-  Optimized for all Chrome OS devices, the Webex Meetings progressive web app (PWA) enhances the collaboration experience with features like screen sharing, breakout rooms, automated translations, embedded apps and meeting recordings
