# Cloud NGFW

Scalable cloud-first Next-Generation Firewall (NGFW)

Google Cloud NGFW is a fully distributed, cloud-first, stateful firewall service that scales automatically to protect your cloud workloads. Google Cloud Firewall offers a unique and simple approach for users to apply a reliable Zero Trust network security control in their cloud environment without any routing changes.
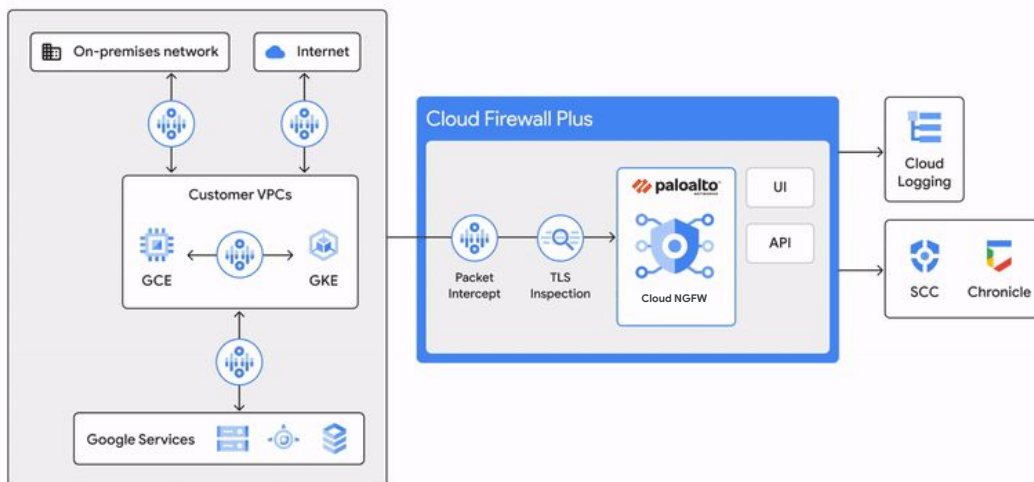

Benefits

Fast & Simple Setup

Advanced Threat Protection, powered by Palo Alto Networks

20X Threat Efficacy over other cloud firewalls

"Increasingly our workloads are migrating to the cloud, we wanted to have comprehensive threat protection closer to our workloads. Google's Firewall Plus with its Cloud NGFW capabilities simplified our network architecture, gave us granular access control and advanced policy enforcement, all of which improved our overall security posture and lowered operations costs."

Richard Persaud, Network Security Architect, McKesson CoverMyMeds
