

Chrome Enterprise Recommended Solution Overview with Coreza Print

Print deployment, management and analysis. Secure. All in one place. Designed for Google environments.

As organizations standardize on ChromeOS and Google Workspace, traditional print infrastructure can slow things down—adding complexity, increasing IT overhead, and limiting security and visibility.

Coreza Print removes that friction.

With a secure, serverless platform built for Google environments, you can deploy, manage, and control printing without the need for print servers or legacy infrastructure. IT teams gain centralized control and real-time visibility, while reducing the burden of managing print across users, devices, and locations.

End users benefit from a simple, consistent printing experience—whether they're on campus, remote, or using shared devices. And, they can easily print from anywhere and pick it up securely from their device of choice when ready to retrieve it from the cloud.

From a single cloud-based platform, access real-time insights into print activity by user, department, and device—helping you improve control, reduce waste, and make more informed decisions.

Discover the benefits

Eliminate infrastructure. Simplify IT.

- No print servers, drivers, or on-prem infrastructure to manage
- Fast, centralized deployment across users, devices, and locations
- Reduce IT overhead and ongoing maintenance

Built for Google environments

- Native integration with Google Workspace—no Active Directory required
- Designed for ChromeOS (managed users, guest sessions, kiosk mode)
- Works seamlessly across distributed and cloud-first environment

Gain visibility and control

- Real-time reporting by user, department, and device
- Set and manage policies across users, groups, and OUs
- Improve cost control and reduce unnecessary print

Secure by design

- Print jobs remain within your Chrome Enterprise environment
- Secure print release across mixed printer fleets
- Maintain control without adding complexity
