chrome enterprise

Managed guest sessions with Chrome Enterprise

Allow multiple users to securely share the same device

Managed guest sessions give IT control while allowing multiple users to securely share the same Chrome device without the need to sign in. Users can browse and visit approved websites while administrators have greater visibility, and the ability to configure and manage the session.

Benefits of managed guest sessions with Chrome Enterprise

Flexible

Organizations can leverage the same devices for managed guest sessions and a session using identity depending on the use case.

Secure

Multiple users can share a device while data stays private and secure. And with ephemeral mode enabled, no data remains at the end of each session.

Manageable

Fully manageable with 200+ policies across hardware, applications and the operating system.

Managed guest sessions give you more control

Browser:
Manage all Chrome apps, extensions and network certificates

User experience:
Auto-launch specific websites, force install apps and extensions, and set wallpaper to match your brand

Hardware restrictions:
OS-level disabling of hardware like USB file storage, webcam, microphone, and speakers

Session duration:
Set session length and time-out configurations

Managed guest sessions throughout your organization

Employee training

Keep decentralized employees informed and up-to-date with a pool of devices that can be easily shared for occasional training.

Browsing and entertainment

Give guests, patients or other users the ability to freely and securely access information and entertainment from Chrome devices.

Self-service

Reduce administrative burden by giving customers, patients, and employees ready access to devices for tasks like check-in and check-out, filling out paperwork or applying for promotions.

Back office

With a back office device for shift workers, you can give employees secure access to HR-related content, information on promotions and other business-critical communications.

> "Opening a Schwab Intelligent Portfolios account on a Chromebook is easy. When a client walks into one of our branches … an associate hands the client a Chromebook. Within seconds, the client is guided to a Charles Schwab webpage, where he or she can learn about the product, complete a questionnaire and open an account. The whole process is electronic, so there's no paperwork — minimizing errors and time spent on administration."
