

# Expand learning possibilities with video

Collaborate more efficiently and effectively with the advanced capabilities of Google Meet.

## Updates to help engage students and moderate classes

Google is committed to finding new and enhanced ways to improve learning – whether you’re teaching remotely or in a hybrid environment. In the coming months, Google Meet is adding new features to give educators more control over their video meetings and boost engagement in virtual classes.

Upcoming features for G Suite for Education	Additional upcoming features for G Suite Enterprise for Education

## Upcoming Google Meet moderation features

Enhanced moderation features let you manage attendees and content quickly, easily, and securely.

### Gain more control when ending meetings.

When leaving a meeting, the moderator can end it for all participants, ensuring no students linger after you have left.

### Manage requests to join meetings more efficiently.

Take charge of meeting requests that come from inside or outside of your school domain. You can:

- Block someone from rejoining after ejection and after their request has been rejected twice
- Get a warning when someone unidentified tries to join
- See more information about each request like name and email address
- Experience fewer interruptions with user experience improvements

### Block anonymous attendees.

You don't need to worry about anonymous users joining school meetings, unless you opt in to a whitelist of domains to allow it.

### Mute all participants.

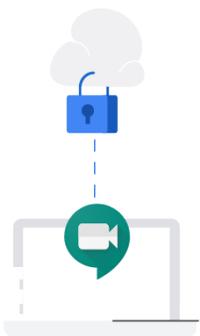

Quickly mute all meeting attendees when needed.

### Take control with locking features.

Choose your lock capabilities and engage all locks at once if needed, including:

- Beginning a meeting only after the moderator has joined
- Locking the chat feature so only the moderator can use it
- Setting it so that only you can present your screen
- Muting all attendees easily

### Built-in security

Google Meet adheres to the highest education security standards, so you can always maintain rigorous privacy and compliance, depend on safe data encryption, and stringent counter-abuse measures
