

On your marks:

How every business can win with generative AI

Gen AI is slated to deliver up to \$4.4 trillion in business value annually.¹

From productivity gains to product innovation, the opportunities are vast. And those who don't embrace them will get left behind.

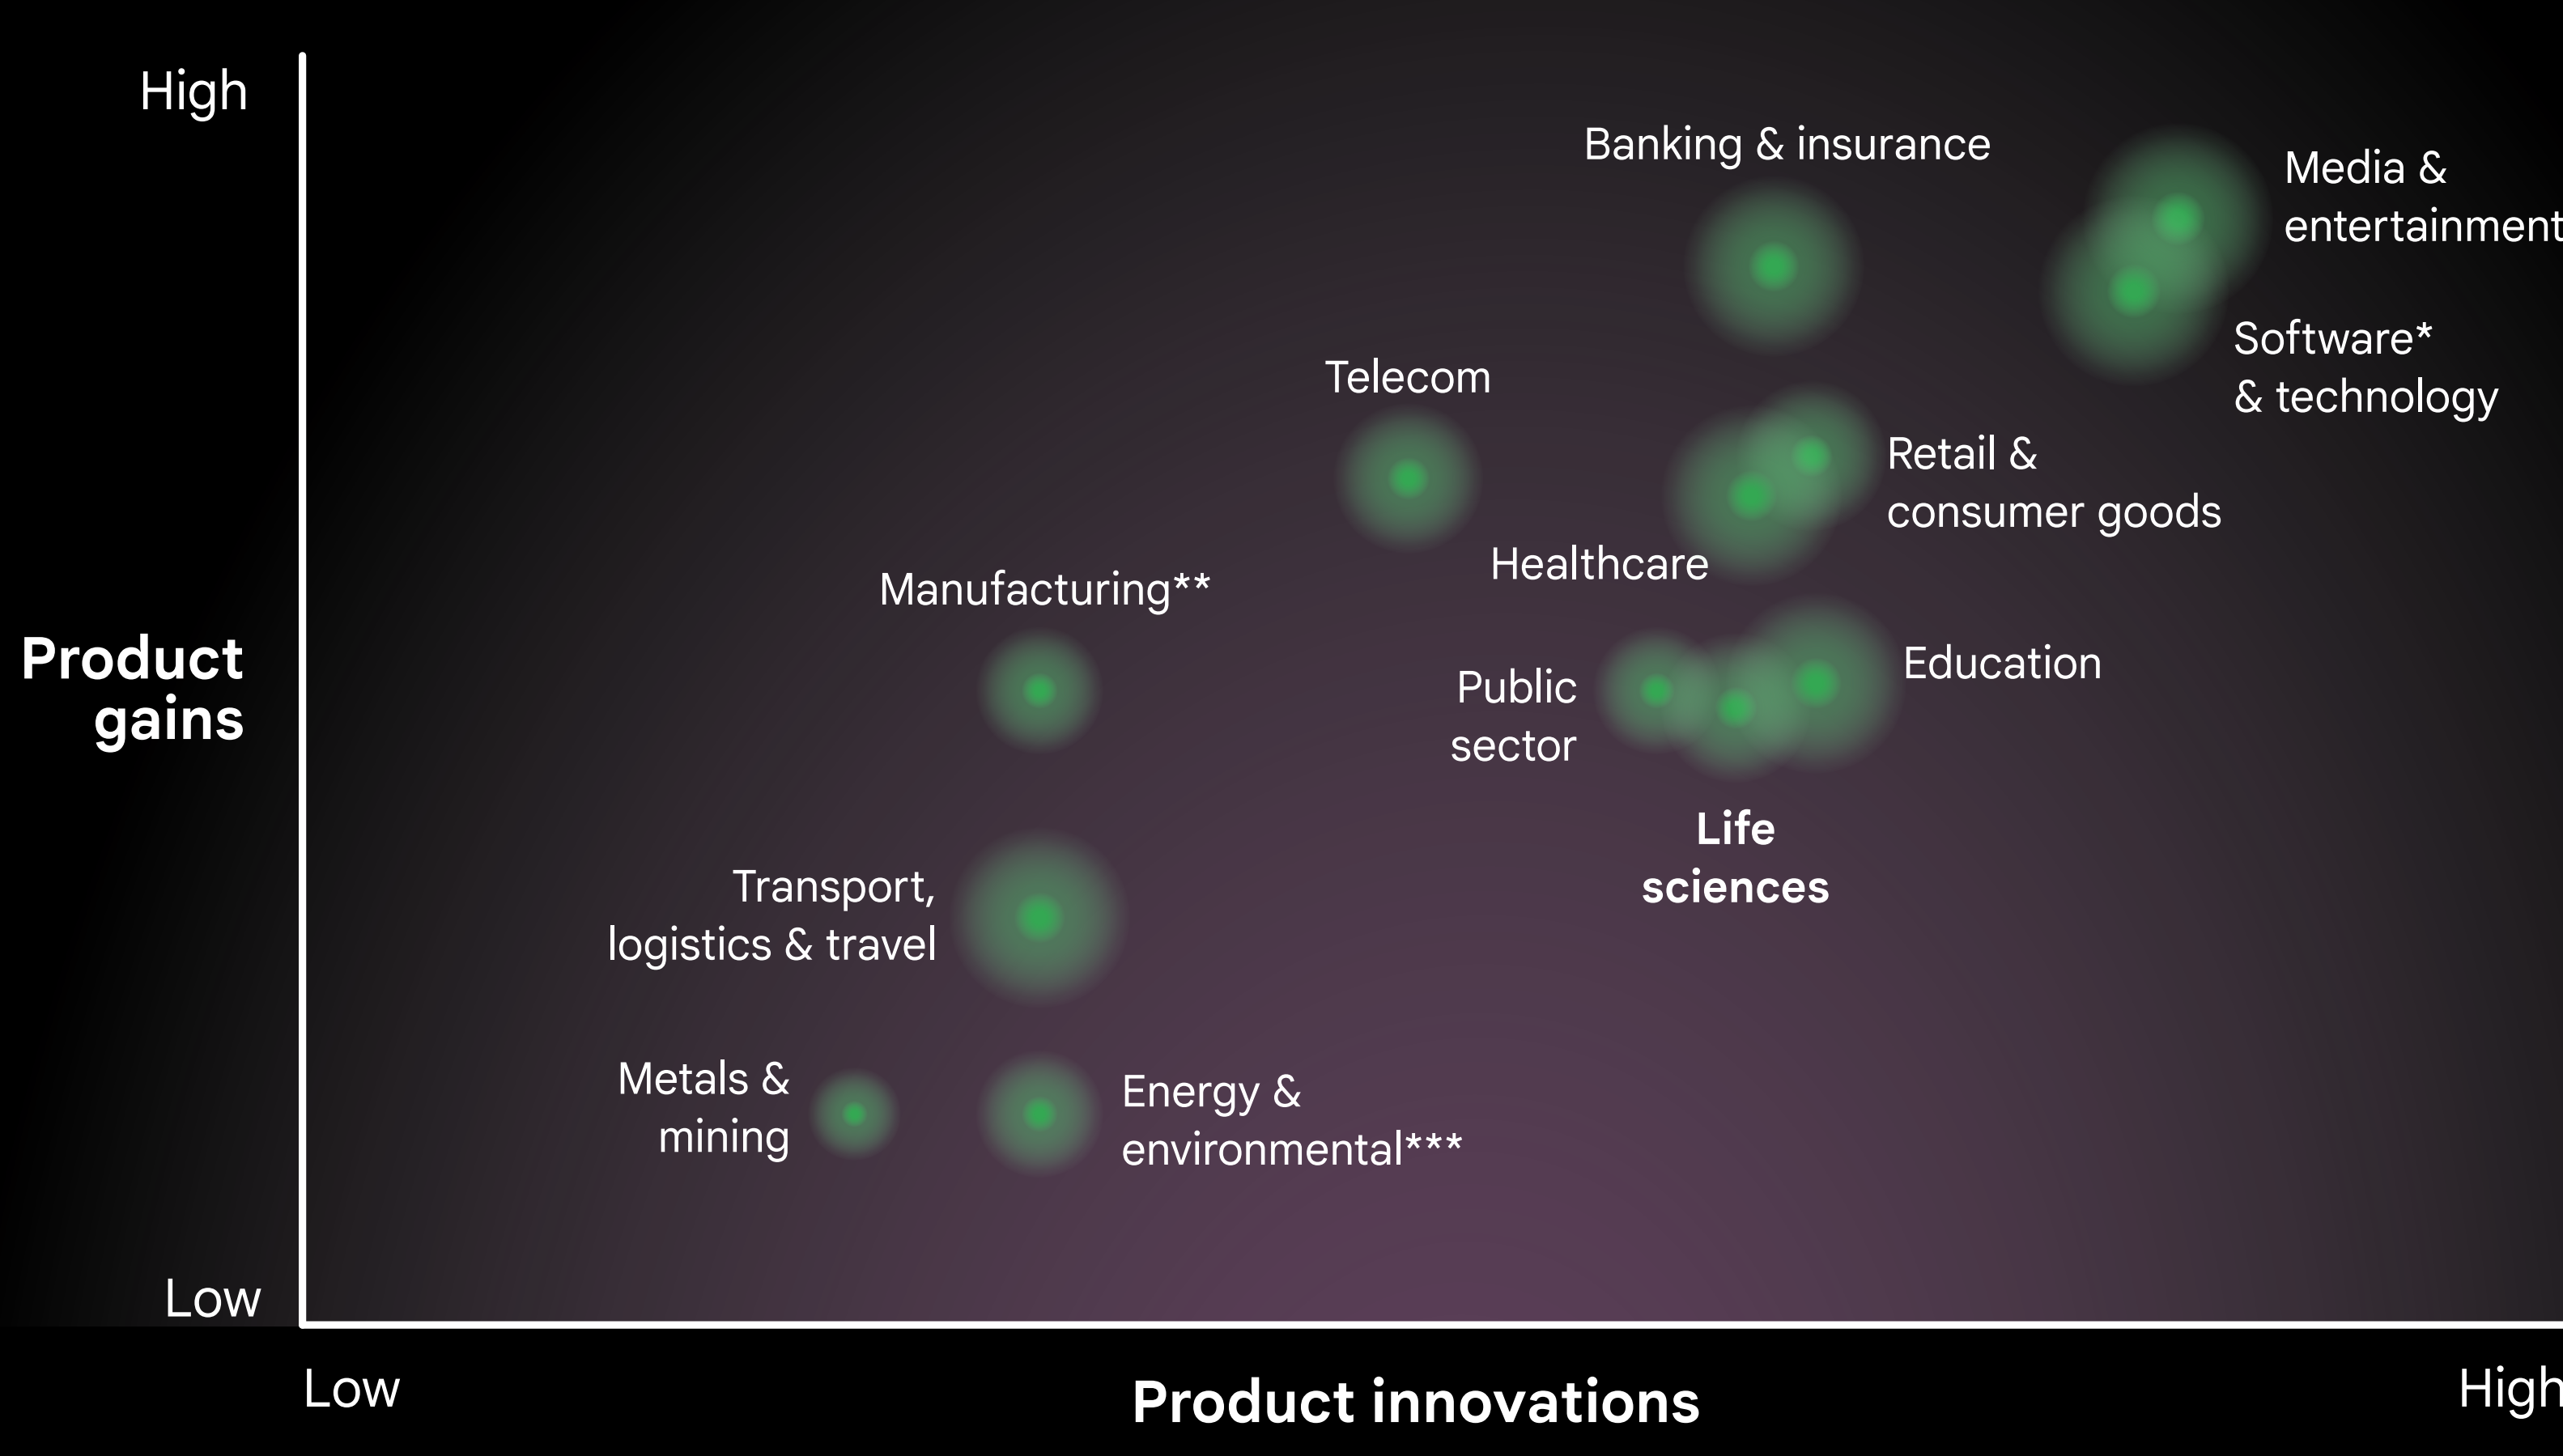

1/3

of organizations regularly use gen AI in at least one function²

50%

of today's tasks estimated to be automated with gen AI by 2060¹

Gen AI's impact is being felt across industries, particularly in the US.

Note: For each industry, industry-specific software is included
 *Industry-agnostic software **Includes aerospace and defense, automotive and assembly, chemicals, semiconductors, basic materials, auto retail ***includes oil, gas, power

75% of the total annual value from gen AI use cases are estimated to be realized in four areas:

Customer operations

Marketing and sales

Software engineering

Research and development¹

Customer operations

Gen AI helps companies deliver the always-on support that today's customers demand.

64%

of consumers expect companies to respond and interact with them in real time³

30-45%

estimated increase in productivity when applying gen AI to customer care functions, valued against current function costs¹

As customers demand increasingly personalized service, gen AI can help enhance marketing and sales.

Marketing and sales

5-15%

estimated increase in productivity of the marketing function, measured against total marketing spend, with gen AI¹

71%

of consumers expect personalized interactions, and 76% get frustrated when it doesn't happen⁴

Software engineering

Gen AI accelerates and augments software engineering, helping to close the gap between supply and demand.

By 2030, the global shortage of skilled workers is expected to reach

85.2 million⁵

>55%

productivity gains for developers using gen AI coding co-pilots¹

To stay competitive, speed is a top priority — and gen AI helps bring products to market faster.

10-15%

increase in productivity, measured against overall R&D costs, with gen AI¹

“We’re already using GenAI in our security products to assist our customers. Natural language search across cybersecurity telemetry helps accelerate the identification of threats and ensure speedy remediation. By leveraging GenAI infrastructure, CISOs can rest assured that security is being adapted in real time to the threat, improving the efficiency of already strained security resources.”

Adam Bromwich
 Vice President Engineering and CTO,
 Symantec by Broadcom
