

Google I/O 2026: What's new in Cloud

Move from initial idea to meaningful impact faster than ever.

The latest AI innovations rolling out from Google I/O are designed to help you build the Agentic Enterprise.

Gemini Enterprise Momentum

NEW MODELS COMING TO GEMINI ENTERPRISE

Gemini 3.5

Expand what's possible with Gemini 3.5, the latest family of models combining frontier intelligence with action. **Gemini 3.5 Flash**, our strongest agentic and coding model yet, excels at complex, long-horizon tasks to deliver real-world utility. Accelerate your workflows with a model that tackles tasks at often less than half the cost of comparable models.

Antigravity

Empower your developers with Google Antigravity, now accessible directly through the Gemini Enterprise Agent Platform. Transform how your organization builds applications by orchestrating simultaneous, agent-driven execution across critical project phases. Inherit standard data privacy protections to ensure your customer data remains in your control and agent activity runs within your secure cloud boundary.

[Learn more](#)

Gemini Spark

Delegate complex work to Gemini Spark, your new 24/7 personal AI agent in Gemini Enterprise and Google Workspace. Spark works efficiently in the background across your workspace and custom connectors to autonomously execute multi-step workflows on your behalf, with your permission.

Managed Agents API

Unlock developer velocity with the Managed Agents API on the Agent Platform. Enable your technical teams to instantly spin up custom agents that reason, call tools, and execute code inside secure, Google-hosted remote environments using a single API call. This allows your business to offload complex infrastructure management entirely and focus on agent behavior.

Securing the Agentic Enterprise

CodeMender

Mitigate risk strategically with CodeMender, an AI code security agent now integrated into the Gemini Enterprise Agent Platform. CodeMender autonomously identifies vulnerabilities within your code, recommends precise fixes, securely tests them, and applies patches across dependent systems with your approval. Automate secure deployments while ensuring your developers retain complete control.

AI Content Detection API

Ensure platform trust and safety with the new [AI Content Detection API](#), available on the Gemini Enterprise Agent Platform. Equip your business with a powerful method to identify AI-generated content from both Google and other popular models, supporting responsible media governance.

Google Pics

Command exact control over your images with Google Pics, a new AI-powered generation and editing tool. Easily move, resize, and transform individual objects, or modify and translate text independently. Simplify complex editing so your organization can quickly update global marketing campaigns, swap product photos, or resize backgrounds for different ad layouts.

Prompt: Transform this futuristic scene into a detailed pencil sketch

Live voice capabilities in Gmail & Docs

Brainstorm, organize, and get work done entirely hands-free with new voice capabilities in Gmail, Docs, and Keep. Quickly find a project due date from your inbox, iterate on a draft of your weekly report, or turn a messy brain dump into a structured list directly within your favorite Workspace apps.
