Google Cloud

Secure and Scalable Telehealth using Google Meet

To address the complex care environment resulting from COVID-19, **front line caregivers need to be empowered** with tools enabling virtual connectivity. Google Meet for Telehealth is a safe, secure telehealth solution for **Everyone, Everywhere**. By providing a secure virtual connection between patients and caregivers, this capability enables organizations to extend care and meet community needs. The benefit to all is protecting front line caregivers by minimizing unnecessary personal contact.

Google Meet for Telehealth Capabilities

Support for HIPAA Compliance

Meet can be configured in accordance with HIPAA best practice guidelines

Private video consultations

Join from a conference room, a laptop, or your mobile device, with a "waiting room" to manage privacy

Dial-in numbers

For up to 47 countries automatically provided

Recording capabilities

Maintain an audit trail of conversations where appropriate and authorized

Live caption option

Make meetings more inclusive with advanced speech recognition technology

How this helps

Empower caregivers and medical staff to quickly set up secure, easy-to-use virtual patient visits. Clinicians and patients can join visits by just tapping the meeting link from the calendar or email on any device and you're in. Increase access and reduce risk by implementing social distancing best practices via virtual care delivery.

Demonstrate your organization's ability to scale to meet the changing needs of your community, today and well into the future

"

With one, click staff can connect from Google Meet enabled conference rooms across 3 hospitals, 15 health centers, as well as caregivers connecting remotely from home."

James LaPlante

Sr. Director of Technology and Biomedical Services, Cambridge Health Alliance

Why Google Meet for Telehealth

Rapid Deployment

Administrators can have their team up and running on in under an hour. For more advanced configurations, customers can tap into our robust ecosystem of partners and Google Professional Services

Reliability

Google Meet for Telehealth has consistent performance & reliability with 99.9% uptime SLA

Security

Google Meet for Telehealth takes advantage of Google Cloud's secure-by-design infrastructure to help protect your data and safeguard privacy. This includes video meeting and cloud recording encryption by default. Google Meet for Telehealth adheres to the same robust privacy commitments and data protections as the rest of Google Cloud's enterprise services
Scale

Google Meet for Telehealth supports 2B + minutes of video conferencing daily

Secure and Scalable Telehealth using Google Meet

Empowering healthcare workers to deliver care virtually, while also keeping them safe by minimizing unnecessary contact.

Value opportunity

Patients and Providers	Community	Organization
# of patients seen by clinicians on site and in "shelter at home"	Safety of Patients and Clinicians	Response Time
