Integrations with Mandiant Advantage

Introduction

Building and maintaining a robust security program is an ever-evolving challenge. The Mandiant partner and technology integrations ecosystem enables security teams to maximize their existing technology investments while benefitting from frontline expertise and intelligence, enhanced capabilities, solutions and services powered by Mandiant.

Mandiant Advantage Platform

Mandiant Advantage is a multi-vendor extended detection and response (XDR) platform that offers a SaaS-based suite of products to help organizations understand their external and internal risks and deliver automation to operationalize it effectively and efficiently.

Unlike other solutions that require a specific set of security controls, Mandiant helps you take advantage of your existing security infrastructure and investments. Integrations turn content into action, reducing risk and making your environment more secure.

Mandiant Advantage Modules

The Mandiant Advantage platform includes four primary modules:

- **Mandiant Advantage Threat Intelligence:** Empowers your team with unparalleled frontline cyber threat intelligence to understand and proactively protect against the latest, most relevant threats facing your organization.

- **Mandiant Advantage Security Validation:** Enables you to continuously understand and measure your security effectiveness. You can test the efficacy of your security controls to identify gaps, overlaps and opportunities for optimization and show stakeholders the value of your security program and investments.

- **Mandiant Advantage Automated Defense:** Continuously monitors your current and historical security data for real-time matches with the latest indicators of compromise (IOCs), and triages 100% of your alerts at machine speed.

- **Mandiant Advantage Attack Surface Management**: Extends enterprise visibility to the external attack surface—applications, services, cloud environments—of your parent and subsidiary organizations alike.

Each Mandiant Advantage module uniquely integrates with a distinct, but broad set of third-party security controls so you can work with your existing security stack.

Building a Partner Ecosystem

Mandiant is on a mission to make every organization secure from cyber threats and confident in their readiness. The partner and technology integrations ecosystem demonstrates our commitment of information and intelligence sharing with our technical partners to provide the best outcomes for customers.

Mandiant and our partners provide innovative security solutions tailored to meet customer needs including:

- Delivering a vendor and controls-agnostic ecosystem powered by technology and frontline intelligence and expertise

- Allowing you to maximize your existing technology investments and benefit from enhanced capabilities that augment existing solutions, enable the launch of new solutions and complement your security stack by wrapping services around the technology you already rely on

- Enabling you to engage with a global community of cyber security experts

By working with Mandiant partners and the technology integrations ecosystem, customers gain innovative security solutions, services, and insights to help them respond faster and with confidence. Integrations allow customers to consume content created by Mandiant in their preferred security systems. These integrations turn content into action, making customers more secure and furthering our mission.

Add Transformative Expertise and Frontline Intelligence to Your Cyber Defenses

Effective security is not based on the security controls deployed, but the expertise and intelligence behind them. Without a significant increase in human expertise, it is impossible for organizations to win the global war on cyber crime. Integrations with Mandiant Advantage give your security teams accessible, automated solutions that instantly provide scale and critical capabilities.

How Mandiant Integrations Work

By integrating with your existing security controls, the Mandiant Advantage platform empowers you to:

- **Correlate**—Match indicators found in your data with intelligence from Mandiant

- **Enrich**—Inform you about a given indicator of compromise (IOC), threat actor, malware family or vulnerability

- **Alert**—Notify you when Mandiant detects an issue enabling you to view alerts in your system of choice

- **Validate**—Verify that your security controls respond as expected through direct integration to the security controls that matter
