Verizon Goes Beyond Multi-Cloud CNAPP With SCCE

Company
Verizon

Industry
Telecom

Google Security Products
**Cloud Security,
Threat Intel**

Summary

With Google Security Command Center Enterprise (SCCE), Verizon security teams assess and mitigate cloud risks, and organizations can proactively manage threats, posture, data, and identities, and respond to security events across clouds with a single, converged solution operating at Google Cloud scale.

Key Points

1. Verizon's Network Reliability and Customer data protection require best-in-class security at Google scale + Mandiant expertise
2. Cloud-native tool with less operational overhead and faster path to operationalize security
3. Features for continuous compliance, data loss prevention, and ability to integrate with other third-party tools

" **The need for having something that can scale at the world class that we live in and have the reliability was a paramount thing and that's looking at all of the providers. We need something at Google scale, along with the key risk insights that it brings along with the partnership with Mandiant that it brings in."**

Arshad Aziz, Director of Platform Security, *Verizon*
