Fiserv and Intelligence-driven SecOps for Turnkey Outcomes

Company
Fiserv

Industry
Financial Services

Google Security Product
Security Operations

Summary
Global fintech company Fiserv is using the new intelligence-driven approach in Google Security Operations to deliver turnkey security outcomes with threat intelligence that's personalized, relevant, and seamlessly embedded.

Key Points

1. Chronicle enriches all event data with threat intelligence, enabling comprehensive actor and campaign analysis across 12 months of history
2. This approach boosts efficiency, reducing manual work and automating threat detection through behavioral analysis
3. Future plans include adversary-focused dashboards, security validation, and integration of customers' internal threat intelligence

" How do we focus on the vulnerabilities that matter most, reducing our attack surface, and communicate that to leaders so they can prioritize resources to eliminate those risks ... with the speed and scale of what Chronicle is delivering us."

Ronald Smalley, SVP - Cyber Operations, *Fiserv*
