This report summarizes the status of computer science (CS) education using data from 18,938 surveys collected in 2014–2015 and 2015–2016 from U.S. K–12 school principals.

These data are from a multi-year Google-Gallup study of U.S. K–12 students, parents, teachers, principals, and superintendents.

This report: goo.gl/GTKrZn
All reports: g.co/cseduresearch

South Carolina

South Carolina principals are more likely to value CS learning compared to the average U.S. principal. They are also more likely to offer CS courses and indicate growth in CS. Responses show greater demand among students and parents, prioritization of CS, and support for CS among their school boards and staff.

Background

Broadening equitable student access to computer science (CS) education is critical to our future, not only because of the increasing demand for qualified workers to fill computing-related jobs but also because it develops critical thinking to solve complex problems, creativity to foster new ideas, and skills to drive innovation. To inform the public on progress made toward ensuring broad participation in K–12 CS education, this report provides results from 2014–15 and 2015–16 Google-Gallup surveys. Topics include perceptions, opportunities, support, and infrastructure. It also offers recommendations to broaden access to CS learning for South Carolina.

Findings

Results from the 2014–15 and 2015–16 Google-Gallup surveys show that while perceptions of CS are increasingly positive, there is still inconsistent implementation of CS education for students in U.S. schools.

- **Positive perceptions of CS prevail** among students, parents, and educators, including 90% of South Carolina principals who believe that CS can be used in many different jobs (U.S. average 88%).
- **The value of CS is high**, where 67% of South Carolina principals agreed that most students should be required to take CS (U.S. average 60%).
- **CS offerings are limited**, with 66% of South Carolina principals reporting offering CS classes (U.S. average 57%).
- **Growth in CS opportunities is anticipated** by 63% of South Carolina principals by 2019 (U.S. average 53%).

To help prepare schools for CS education, the study also identifies challenges to providing CS education for all students in South Carolina.

- **Parents' demand for CS is not being heard**: 91% of U.S. parents want their child to learn CS, whereas only 11% of South Carolina principals believe there is strong parent demand for CS (U.S. average 8%).
- ** Principals perceive weak school board support for CS** in South Carolina, with 54% indicating school board commitment (U.S. average 41%).
- **Insufficient budget for a CS teacher** (52%), lack of teachers trained in CS (50%), and **insufficient budget for technology** (43%) are the greatest barriers to offering CS for South Carolina principals.

Recommendations

- **Promote broad, diverse participation** by taking advantage of interest and growth while integrating equity practices into CS recruitment and pedagogy.
- **Expand CS offerings** by connecting with communities, legislators, and organizations advocating for CS education.
- **Allow CS classes to count towards graduation and college admissions** to encourage participation.
- **Increase qualified CS teachers** through incentives and support of quality teacher preparation and certification.
- **Prioritize funding** to meet the demand for CS education.

## Data Tables

The descriptive data tables below show responses by 222 South Carolina K–12 principals compared to the full sample of 18,938 surveys collected in 2014–2015 and 2015–2016 from U.S. K–12 school principals; sample size may vary by question. Percentage point differences from the U.S. for each category were calculated from the percentages bolded below. Full methodology is at goo.gl/7qwXgP.

### Perceptions
