US-Mattress wakes up online sales with Shopping campaigns

A quarter-million customers
Online since 2001, US-Mattress is one of the country's largest mattress retailers. They carry over 2,500 brand-name mattress sets and serve 250,000 customers across the United States. Looking for greater control and insights into sales, the company upgraded their Google Product Listing Ads (PLAs) to Shopping campaigns.

Better campaign performance
The retailer began using PLAs in January 2012 to attract more business. “They became more of a focus once traffic ramped up, and delivered high conversion rates,” says Marketing Manager Wendy Yuan. “Having PLAs and text ads appear concurrently was mutually beneficial. PLAs are now an integral part of our online ad strategy.”

Shopping campaigns offer an intuitive way for retailers to manage PLAs and sell products on Google. US-Mattress can now manage a campaign much as they would manage their brick-and-mortar stores. Shopping campaigns let them browse inventory and group products they want to bid on, all in Google AdWords. Additionally, advanced reporting and optimization features help to measure performance and estimate growth opportunities.

More accurate measurements
Regular PLA campaigns drove lots of traffic to US-Mattress for specific brands. PLAs provided low average cost-per-click (CPC) and cost-per-acquisition (CPA) rates, plus high clickthrough and conversion rates. Shifting to Shopping campaigns in February 2013 brought more improvements.

“With Shopping campaigns, we can break everything down by brand and sub-brand, without overlapping items in our product groups,” Yuan explains. “This gives us more accurate performance metrics, and we save several hours per week on feed and campaign management. The time and effort we save can be used to optimize performance of the brand, sub-brand, and product.”

“Without Shopping campaigns, we would have never known what was driving conversions for different brands and what the bidding landscape looked like.”
— Wendy Yuan, marketing manager, US-Mattress

‘Extremely simple’ transition
The shift to Shopping campaigns was “extremely simple,” Yuan adds. “The setup made it easy to transition and categorize all of our products. With product groups instead of product targets, it was easier to manage bids, which was one of our main reasons for switching over. We found opportunities to segment product groups even further, to bid by stock keeping unit (SKU).”
By subdividing their brands, for example, US-Mattress can see exactly which items have a large impression share. “Without Shopping campaigns, we would have never known what was driving conversions for different brands and what the bidding landscape looked like,” Yuan says.

“Shopping campaign benchmark metrics give us a clearer picture of what will happen if we change our bidding strategy.”
— Wendy Yuan, marketing manager, US-Mattress

Clearer picture of bidding landscape
Shopping campaigns have delivered measurable results for US-Mattress. The clickthrough rate (CTR) climbed 30 percent while the average order value rose 10 percent. CPA dropped, while ROI and the conversion rate both improved.

“Shopping campaign benchmark metrics give us a clearer picture of what will happen if we change our bidding strategy,” Yuan says. “With new, additional performance metrics, we handle bidding strategy and campaign management with ease and confidence. We plan on expanding on our Shopping campaigns even further.”
