In the UK, Hackney Council is using G Suite, Google Meet and Chrome Enterprise to keep their team of 4,000 staff connected as they work remotely. Our priority is to make sure that essential services can still be delivered for its citizens. Chromebooks are fast to deploy and work seamlessly with G Suite and Google Meet, keeping our employees effective and productive while working remotely.”

Henry Lewis, Head of Platform, London Borough of Hackney

Video conferencing with Chrome OS devices

2020 has drastically changed the way we work.

Remote work is here to stay. Employees are turning to video conferencing solutions to stay connected and collaborative. With Chrome OS devices, employees have access to industry leading video conferencing solutions, security without interruption, and devices that keep employees connected regardless of use-case.

**Supported solutions**

Chrome OS devices support Google Meet, Slack, Duo, Zoom, Citrix, Cisco WebEx, Microsoft Teams, Blue Jeans, Skype and many more.

Access full-featured video conferencing applications using Chrome Browser, download the video conferencing apps you’re looking for from Google Play, or leverage Chrome Extensions to enhance the experience.

With Chrome Enterprise, IT admins can deploy any video conferencing apps they want their employees to have access to through the Google Admin console. Visit our help article to learn more.

**Security without interruption**

- Chrome OS updates run in the background, ensuring devices stay secure without interrupting the user during their meeting.
- Multi-layered security and data encryption to safeguard employees from phishing, virus attacks and other vulnerabilities.
- Applications leverage sandboxing to keep data from applications separate from each other, ensuring other services on your Chrome OS device don’t have access to a meeting.
Devices that keep employees productive, regardless of use-case

Chrome OS devices are built with features and specifications to match each user:

- Chrome OS devices are available from leading device manufacturers including: Dell, HP, Acer, ASUS, Lenovo and Samsung.
- Chrome OS devices come ready with front-facing cameras, and are available in all types of form-factors to meet each worker’s requirements such as laptop, desktop, convertible, tablet and all-in-one.
- Chrome OS devices optimize for portability, with features such as LTE support, long-lasting battery life, and rugged chassis available.
- Chrome OS devices come with security enhancements, including built in privacy screens, webcam covers and fingerprint readers.

For use with video conferencing, we recommend users select devices the meet the following minimum requirements for collaboration:

- Processors: Intel Pentium, i3
- RAM: 8 GB
- Storage: 128 GB
- Screen Size: 13-15”

Examples of devices that meet the minimum requirements for video conferencing and are ideal for remote workers include:

- Acer Chromebook 714
- ASUS Chromebook Flip c434
- Dell Latitude 5400 Chromebook Enterprise
- Google Pixelbook Go
- HP Pro c640 Chromebook Enterprise
